Ref. No.: Date :

03-05-2018

We Nandini Creation, based in Ahmedabad, have setup a weaving plant in Ahmedabad's Narol area, and we are are having the following infrastructure:

Looms	SUDAKOMA, Japan
Quantity of Looms	20
Compressor	ATLAS

In the above project we have chosen the **Non Metallic Compressed air piping systemPPCH FR V2 from** Anjney Tubes Indiawas successfully installed by them in the year 2016.

Recently they conducted an Air Audit at our plant after 2 years, using Digital Pressure Gauges at our factory to assure us of the continued benefits of their Piping system and us jointly with the air audit team of Anjney Tubes India, the Digital pressure gauges were fixed at the First loom and the very last loom and we witnessed the following results:

Pressure Drop	**Only 0.03 Kg/Cm2**

The above pressure after 2 years of installation of the piping is almost negligible and Anjney Tubes India**Non Metallic Compressed air piping systemPPCH FR V2**, has provided us with many other benefits also and we have mentioned them below

Leakages from their piping system and joints	NIL
Moisture formation	NIL as the piping does not heat up and does not attract moisture like other metal piping
Maintenance in machines and accessories	NIL, as we are getting very clean air so all our accessories and machines do not face the problem of maintenance

Based on our experience we recommend the use of Anjney Tubes India**Non Metallic Compressed air piping systemPPCH FR V2**piping in all weaving plants to save energy, thus saving a lot of money
