We Signet Denim Pvt Ltd based are having our weaving plant in Surat and we are using Anjney Energy Saving PPCH FR Pneumatic Pipeline since date 01/09/2017.

Anjney Tubes India have done successful installation of their pipeline in our plant having capacity as under:

No. of Looms:	120
Brand of Looms:	TOYOTA 810
Compressor Brand:	INGERSOLLRAND CENTAC COMPRESSOR
Compressor CFM	6240
Temperature & Pressure	Air Temp-37 Deg C & 7.5 KG/CM2

Since the date of installation, we have been observing excellent performance of their product range without any leakage, friction loss and pressure drop. To verify the energy saving as committed by them, they have conducted an Air Audit in our plant with their machine as well as digital pressure gauge. As a result, we have witnessed the result as under:

- Pressure Drop in Anjney PPCH FR Pneumatic Pipeline: 0.00 KG /CM2

The observed pressure is almost negligible which is actually leading to Energy Saving in our plant. Not only that, but also we have observed few major benefits such as,

- ✓ NIL Moisture formation
- ✓ NIL Maintenance due to No leakage and rust free air

Based on our experience and observation, we would definitely recommend Anjney Tubes India and their energy saving PPCH Pipeline considering their innovative technology and their excellent customer service oriented approach.
