

SAC ENGINE COMPONENTS PVT.LTD.

(Formerly **Southern Auto Castings Pvt. Ltd.**)

We **SAC Engine Components Pvt Ltd** having our manufacturing facility at Gumudipoondi Chennai for Automobile Ancillaries and parts are using **Metal Pipes** in our foundry plant since last few years in compressed air application.

We are quite unhappy with our Metal pipeline due to 1-2 Bar pressure drop as well as leakages and corrosion. We are planning to replace our existing Metal Pipeline with an Innovative and Energy Saving **PPCH FR Pneumatic Pipeline** manufactured by **Anjney Tubes India**, since it is already installed in our company in Machinery Division where we have observed in the recent Air Audit which was conducted by Anjney Tubes India that there was just 0.01 bar pressure drop which is very much negligible compared to metal pipeline.

Anjney Tubes India has also conducted the Air Audit in the Metal Pipe in our Foundry unit as well and we were very much disappointed to see the result of the Air Audit in metal pipeline as mentioned hereunder:

❖ Pressure Drop: 1 Kg / Cm²

After looking at the result of the Air Audit, we have been very much positive and confident enough about Anjney product range and have decided to replace the whole Metal Pipeline. We would like to install Anjney PPCH FR Pneumatic Pipes and Fittings only in place of Metal Pipe since Anjney brand PPCH FR Pneumatic Pipe is having the special features like 0% leakage, least friction loss and head loss as well as NIL Moisture and corrosion.

We will use these product range in our plants and will surely recommend to other clients as well since **Anjney PPCH FR Pneumatic Piping** system is the best and complete solution for compressed air pipeline.

For,

SAC Engine Components Pvt Ltd

(**Foundry Division**)
